Volpi and Luminus cooperate

Early access to the latest LED technology:

Volpi AG, headquartered in Schlieren (Switzerland), has a long-standing reputation as a specialist in fiber-optic and optoelectronic lighting systems. In order to be equipped for the future, the company relies not only on its own intensive and practically oriented development program in the area of photonics, but also on cooperation with competent partners. Volpi is thus now a certified solution partner of Luminus Devices in Billerica, Massachusetts (USA), a company that is regarded as the industry leader in the development of the latest LED technology. Both partners expect trend-setting synergy effects from the cooperation: thus with the aid of the cooperation partner, Luminus wants to support customers better and with shorter development times in the case of complex lighting solutions. By means of early access to new LED technologies, Volpi can further expand its technological lead especially in high-end applications, e.g., in the areas of medical technology, life science and industrial image processing. Customers of both companies will in this way benefit from the cooperation.

Volpi and Luminus cooperate. Volpi thus gets quick access to new LED technologies. Dr. Scott Kittelberger, COO (Chief Operating Officer) of Volpi USA, is glad that customers of both companies will benefit from the cooperation. (Photo: Volpi)

About Volpi

Volpi develops and produces fiber-optic and optoelectronic systems and devices. With locations in Schlieren (Switzerland) and Auburn (NY, USA) the company is centrally represented in the European and American economic regions. Its employees are constantly innovating in the area of photonics and thus meeting the high requirements of customers in the target markets of image processing (machine vision), medical technology, life science and industrial endoscopy. An important focus is on customized solutions that can be well-integrated in the most varied applications and are coordinated with the respective application requirements.

About Luminus

Luminus Devices, headquartered in Billerica, Massachusetts (USA), is regarded as the industry leader in the development of the latest LED solutions. The Luminus Big Chip LEDs™ are the brightest and most versatile solid body light sources available on the market today. They are suitable for all applications that require maximum lumen density, efficiency and reliability, in commercial and industrial lamps as well as with theatrical lighting, projectors, signs, medical devices or devices for UV curing.
